Para el especiontiempo: - Minrosumi: f(r) = 8(r) = 1

- Schwardschild:  $f(r) = \frac{1}{8(r)} = \frac{1-rs}{r}$  (rs = 2GT)

- Reisson - Nordsträn:

f(r) = 1 = 1 - Is + GQ²
CH r²

- 1 cottler: Incluye constante cosmologica  $f(n) = L = 1 - \frac{r_s}{r} + \frac{\Lambda r^2}{3}$ ;  $\Lambda^{s} \circ Anth-for de sitter$ 

Derivación alternativa para la correcto alon de le precesion del perihetro - La idea es comparar des elapses. und es on especiations in pertur ber (Minkoswki), y otre en el especio-treespo pertorbedo. 92=-63943+ 965+ 65985 92 = - f(4) 5 gtz + gtz + hz 925 En una eproximación binamid: (1+x)m = 1+mx+... · schwarschild ". f(r) = 1 - 10 = Vf(r) = (1-15/2 ~ 1-15+... VIEW = (7- 10) 1/2 1/2 + 100. Comparando

Comparando  $dt' = (1 - \frac{15}{27})dt \wedge dr' = (1 + \frac{15}{27})dr (4)$   $En el = (1 - 9) dA = (1 - 9) dr de = \frac{R^2}{2}de$   $dA = 1 - 1 + \frac{15}{27}de$   $dA = 1 + \frac{1}{2} +$ 

E-T-S

$$dA' = \int_{R}^{R} r \, dr' \, d\phi$$
, con  $dr' \, dedo$  (A)

 $dA' = \int_{R}^{R} \left(1 + \frac{r_{s}}{2r}\right) \cdot r \, dr' \, d\phi = \frac{r_{s}}{2r} \cdot \frac{r_{s}}{$ 

$$\int d\phi' = \int \frac{M^{2}}{1 + \frac{3\Gamma_{5}}{2R}} d\phi$$

There are elipse  $R = \frac{1}{1 + e \cos \phi}$ 
 $E : eccentricided$ 
 $l : \epsilon_{emi} - letus rectum$ 

$$\Delta \phi' = \int d\phi + \frac{3\Gamma_{5}}{2l} \int (1 + \cos \phi) d\phi$$

$$\Delta \phi' = 2\pi + \frac{3\pi\Gamma_{5}}{2l} = \frac{1}{1 + \cos \phi} = \frac{1}{1 + \cos \phi}$$

$$\Delta \phi' = 2\pi + \frac{3\pi\Gamma_{5}}{2l} = \frac{1}{1 + \cos \phi} = \frac{1}{1 + \cos \phi}$$
